

DIFFERENTIAL DYNAMIC CONTENT DELIVERY WITH
PRERECORDED PRESENTATION CONTROL INSTRUCTIONS

ABSTRACT

5

Methods, systems, and computer program products are disclosed for differential dynamic content delivery. Typical embodiments include providing a session document for a presentation, wherein the session document includes a session grammar and a session structured document; receiving a prerecorded presentation control instruction; selecting from the session structured document a classified structural element in dependence upon the prerecorded presentation control instruction and in dependence upon user classifications of a user participant in the presentation; and presenting the selected structural element to the user. In typical embodiments, the prerecorded presentation control instruction has an associated time stamp.
